

RG2 Solutions Expands Biometric Product Offerings **Increased security and cost savings are available**

Oklahoma City, OK – September 26, 2005 - RG2 Solutions, a credit union technology developer and consulting company announced the expansion of its biometric solution products and partnership with Digital Persona, the leading provider of fingerprint-based authentication solutions. RG2 Solutions now offers a full suite of biometric security tools for the enterprise in addition to its *BioTran* member verification system.

As a Digital Persona developer, RG2 Solutions launched its *BioTran* member verification system in 2002 which allows credit unions the ability to positively verify their members' identity using fingerprint verification technology. "We saw early on that biometric technology can greatly reduce identity fraud" says RG2 Solutions president Roger Grant. "We are now extending this technology throughout the credit union for both increased security and cost savings"

- **Network and Desktop Security:**
Having extended their partnership with Digital Persona, RG2 Solutions can now provide credit unions increased network and application security at the employee level using the DigitalPersona® Pro Server and Workstation software. "Passwords are the 'weak links' in terms of securing a credit union's network" says Grant. "With this solution, the fingerprint is now used, which removes the threat of a compromised password." In addition to the network login, a user's fingerprint can also be used to secure desktop applications and web site logins as well.
- **Cost Savings:**
Password administration is a time consuming operation for both the end user and the technology staff. In addition to the benefit of a secure network, the DigitalPersona® Pro solution can save the credit union money by reducing the amount of time wasted because of password lock-outs and administration, according to Grant.

"We are excited about the opportunity to provide these timely solutions and continue to be a leader in biometric solutions for credit unions" says Grant. "Digital Persona has a genuine interest in the credit union industry and has been working closely with us in an effort to extend biometric technology to our current and future clients".

About RG2 Solutions, Inc.

RG2 Solutions is a leading credit union technology integrator, developer and consulting company. RG2 Solutions develops and integrates custom solutions including desktop applications, web/browser-based applications, database development/applications and report writing solutions for credit unions throughout the U.S. RG2 Solutions is also a leader in biometric and identity solutions for credit unions with products such as *BioTran* biometric member verification and their *Validity* driver license scanning solution.
